

Business Intelligence Developer

As a business intelligence developer in a Fintech company with the mission to empower financial inclusion, you will be joining an awesome dev team building ETL, data marts, reports and visualizations in a fast-paced environment. We use the latest cloud technologies (both Microsoft Azure and Amazon Web Services) and are looking for an avid learner with a passion for business intelligence.

Job Responsibilities Include:

- Collaborate with stakeholders in the design and development of reports/visualization.
- Implement BI reports/visualizations, design data marts/data warehouse and develop ETLs to load them.
- Implement and execute data integration, data migration, data wrangling and validation projects.
- Support and maintenance of existing solutions.
- Write unit test scripts for various processes/procedures.
- Research and conduct analysis in support of resolution of production issues.
- Demonstrate strong problem-solving capabilities and approach each problem in a logical and analytical manner with high degree of perseverance; produce definitive statement of the issues, and identification of alternative solutions, the recommended course of action, and the consequence of the decision.
- Work effectively both as a member of a team and independently; establish good judgment regarding routine, significant, and sensitive matters or those issues for which direct response is inappropriate and promptly apprise Manager
- Collaborate in daily scrum meetings and take charge of managing your tasks for your projects.
- Create documentations and other technical duties as needed.

Qualifications

- Bachelor's Degree in Computer Science, Information Systems or related technical field, required.
- Minimum of 2 years progressively experience with SQL, stored procedures, report building, and data modeling
- Expert knowledge of RDMS (at least one of these MySQL, SQL server or Oracle)
- Must have technical skills: SQL, Reporting tools (building reports), and Data visualization Tools
- Experience with BI tools: PowerBI, Tableau, Crystal report, OBIEE, Informatica, Pentaho report/kettle, SSRS, SSIS, etc.
- Nice to have: SQL Tuning, NoSQL, Big data, Data Lake, Python and familiarity with Cloud services (Data factory, AWS firehose, glue, quicksight, etc.)
- Ability to manage multiple tasks with changing priorities required.
- Experience with version control (SVN, Git, etc) and release cycle
- Must be data savvy and keen on driving business intelligence projects.
- Independent, a quick learner and familiar with agile methodologies
- Excellent analytical, organization, problem-solving, *communication* skills required.
- Accommodate work schedule and works flexible hours to meet crucial project deadlines as required.
- Ability to work as a member of a team, as well as individual contributor, required.
- Keeps abreast of industry standards and development best practices.
